

9. How do living things breathe?

Animals like cats, dogs, tigers breathe through their lungs. Humans also breathe through their lungs. Insects like cockroaches, mosquitoes breathe through air holes in their bodies. Fish breathe through gills and take in oxygen dissolved in water. Plants breathe through stomata.

10. Why animals move from place to place?

Animals move from place to place in search of food , shelter or to run away from their enemies.

11. What is reproduction?

All living things produce young ones of their own kind .This process is called reproduction. Eg. Dogs give birth to puppies and snakes lay eggs from which babies come out.
